

## Gravity Forms – PDF

This plugin allows you to generate PDF documents that contain user-data captured with Gravity Forms. The look and feel of the PDF can be controlled through four available templates.

1. Check the plugin's default settings in the Dashboard under Form -> Settings -> PDF. You may want to tweak the PDF paper size, PDF template and font family, size and colour.

2. Next, it's time to setup a PDF for the Gravity Form. Select the Gravity Form you want integrated under Forms in the Dashboard. From the form editor page, hover over the form Settings menu item and select PDF from the sub-navigation. Finally, click the Add New button to create a PDF. Both the Name and Filename settings are required. Select the notifications you want to attach it to in the Notifications setting so that the PDF is **automatically emailed** when your form is submitted. Finally, click "Add PDF" to complete the setup.

- Once the PDF has been set up, and a form has been submitted, the PDF will be included as an attachment to the selected email Notification, and/or Administrators can view and download it from the Gravity Form "Entries" page in the Dashboard.
