

Gravity Forms – Pre-Submission Confirmation

This plugin allows the user to review all data entered on a form before submitting. They can then choose to submit or go back and edit.

1. Insert a page break at the end of the form:
drag & drop “Page” button from the Standard Fields box.

2. Then insert a HTML field in this second (or last) page:
drag & drop “HTML” button from the Standard Fields box.

3. Add the merge tag `{all_fields}` to this HTML field to include all submitted fields in the confirmation.

If you wish to customise further, you can edit the HTML field to add other text or include a subset of form fields using merge tags for individual fields:

See available merge tags by clicking on the drop-down menu near top right of content box.
