

Wordpress Home Page News Slider – control order of display

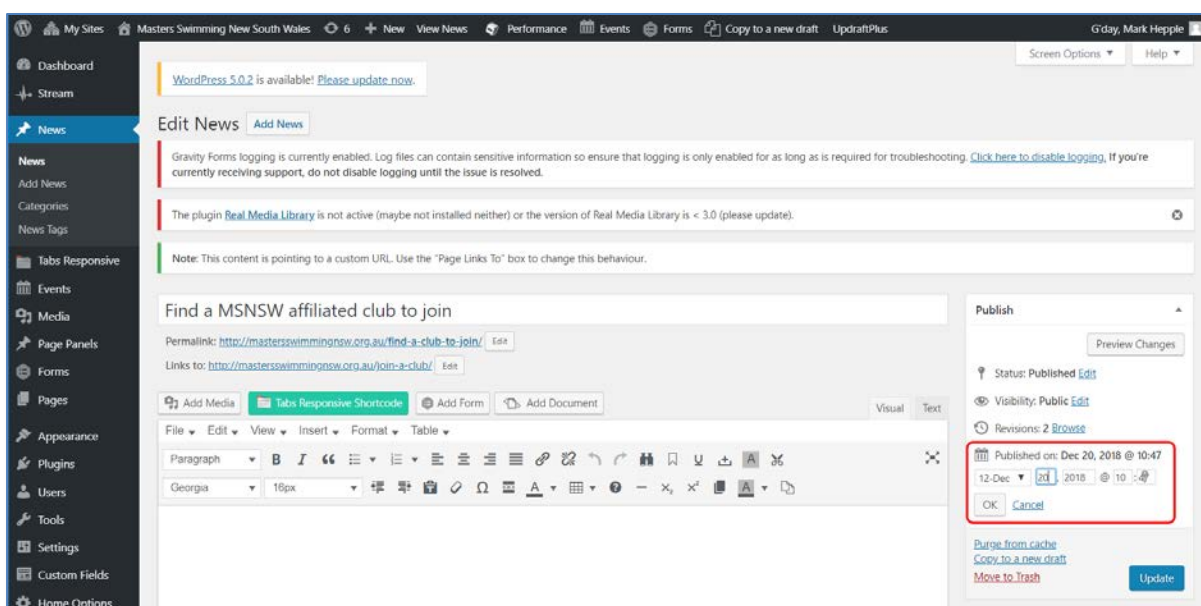

By default, the home page News Slider will display the 5 most recent posts, in order of date published. The only way to control the order of the posts displayed in the slider is to manipulate the date of posting.

To do this, go to your **Dashboard**, click on **News**.

From the posts in the above screenshot, the post “Made for the Role” published on the latest date, 2019/01/01, will be displayed first.

To manipulate the order to have, say “Find a MSNSW Affiliated Club”, first in the display, edit this news item/post and change the “Published Date” to be later than all others. See screenshot below.

Don't forget to save by clicking "Update".
